

64 Rising Two Year Old Bulls ON FARM AUCTION 1 pm Thursday 17 June

www.koanuiherefords.co.nz

OPEN DAY

Thursday May 27th

from 11:00am at the Sale Shed, 811 Maraetotara Road Or view the cattle any time by prior arrangement Phone: 06 8747844 or email: info@koanuiherefords.co.nz

KPH KOANUI Polled Herefords

64 Rising Two Year Old Polled Hereford Bulls

ON FARM AUCTION with bidr® 1 pm Thursday 17 June

The 2021 sale bulls are being sold on farm and online by bidr[®] hybrid auction. We encourage you to view the bulls prior to sale. Internet phone calling will be available for agents on sale day through bidr[®] wifi. Contact Koanui or your livestock agent for further information.

- 800 registered cows
- Good value, top genetics
- All performance recorded
- Bulls semen & service tested
- Performance & BVD tested
- Rigorous selection
- TB status C10
- Satisfaction guaranteed!

Conditions of Sale

 This sale is a "Hybrid online and on farm auction sale." In addition to the normal on-farm auction format the sale will be hosted by bidr[®] (www.bidr.co.nz) as a HYBRID auction, with online bidding and a live-stream available on sale day. Note the on-farm auctioneer remains in control of the sale and the fall of the hammer. All intending ONLINE purchasers must register on bidr[®] in advance of the sale date, by visiting the website and using the "sign up" button, adding their contact information and nominating the agency they would like to purchase through and account held with that

agency. Alternatively, purchasers can organise an agent from one of the agencies listed on bidr[®] to buy on their behalf.

All intending ON-FARM purchasers must register with the booking clerk prior to commencement of the sale.

- On behalf of the vendor, PGG Wrightson Ltd (PGW) will pay a purchasing rebate of 6% of the purchase price excluding GST, plus GST, to livestock agents with a PGW Monthly Account that are also Accredited Agencies on bidr[®] where the buyer has registered on bidr[®] under that Accredited Agency.
- 3. All Lots sold exclusive of G.S.T
- 4. PAYMENT: Fourteen days after the sale. bidr[®]'s Conditions of Sale and Terms of Use apply. These terms can be inspected at https://bidr.co.nz/content/user-terms-conditions PGG Wrightson (PGW)'s Monthly Account Terms of Trade also apply to the extent deemed relevant by PGW. The current versions of PGW's Monthly Account Terms of Trade are also available online at: https://www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions or in hardcopy on request.
- 5. Although all care has been taken in compiling this Catalogue, no responsibility will be taken for any errors or omissions thereof.
- 6. No warranty will be given with any Lot, and as all Lots are open for inspection prior to the sale, the same are sold with all faults, if any. No compensation shall be made in respect of any fault or error of description of any Lots; however, the vendor reserves the right to make compensation to a buyer if it is the vendor's wish. It is recommended to inspect bulls before the sale where possible.
- 7. Every Lot will be at the risk of the purchaser as from the fall of the hammer.
- 8. Buyers are advised to insure Bulls. All Bulls remaining on the property pending delivery should be insured by the Purchaser as no responsibility shall be taken by the Vendor. All bulls are to be uplifted by 1 July, 2021 unless arrangements prior to the sale have been made.
- 9. ALL STUD BULLS purchased must be uplifted as soon as transport is available. Transfers will be available on Stud Bulls. Please provide Transfer Herd Number(s) to the vendor on the Purchaser's Slip if a transfer is required.
- 10. All Bulls have been Service and Semen tested. All bulls are BVD Tested Negative and vaccinated for BVD with Hiprabovis prior to sale.
- 11. T.B. STATUS C10.

2

For further information contact:

- The bidr[®] team is always available to help purchasers get signed up and registered, and the HelpDesk is proudly managed in-house from the Waikato. Please call 0800 TO BIDR (0800 86 2437), or email enquiries@bidr.co.nz for assistance at any point. Alternatively, contact Caitlin Rokela, National Territory Manager, for any enquiries on 0274056156.
- The Auctioneer: Mr Cam Heggie PGG Wrightson Genetics 0275018182
- Your own livestock agent.

The Koanui Sale 2021

Dear friends and fellow breeders,

What a strange year it has been. This time last year we were unsure as to whether we could have an on farm sale in June. In the end, after many communication updates, restrictions eased the night before the sale and a great day was had by all on farm as usual. We have learnt so much about being adaptable and agile for change.

In New Zealand we have been very fortunate for where we live and that the economy has continued to prosper. Farming has not changed, however, as we continue to face multiple challenges from markets and climate but we still need to expect the cattle we run to be the most efficient and productive animals that our environment and genetics can sustain. This creates some exciting and frustrating challenges that we believe our herd size and our diversity of genetics are able to address and solve.

We are making a significant investment in Genomics to identify the traits that each animal offers while continuing to back it up with intensive performance recording. We have invested over \$40,000 annually in gene testing so this is no small commitment for Koanui but we believe that in time it will give us the information power for accurate selection that no other herd will have.

Koanui has prioritised phenotype, soundness and structure with balanced genetics to produce cattle with longevity and sustainability across diverse environments and breeding programmes. We operate a very informed and economic farming system with priorities on fertility and performance.

Culling is also an essential aspect of breeding and this is the real benefit of having numbers as we continually look for a reason to put an animal out and only the very best get through. To be selected for mating, every one of our 800 registered cows must raise a calf every year from two years of age. We calve over 280 two year heifers annually and this is a vital part of our programme.

Health, performance and service and semen testing are key profit drivers and Koanui makes considerable investment in these areas to give all clients confidence and reassurance when purchasing a bull from us. Our commitment and passion are demonstrated by our level of investment for the long term benefit of our clients and our business.

We encourage you to join us on sale day. We very much look forward to being able to share some hospitality with you and invite you to share our commitment to the future of New Zealand's beef industry by purchasing a Koanui Bull.

Kindest regards Chris and Jennifer Chesterman

\$5000 for 50 Straws of semen for Within Purchaser Herd Use Only. Layer has an amazing phenotype with thickness, depth, hind quarter and he can show it off with his presence and style. Layer's dam is proving to be an exceptional young female with her first two sons being retained at Koanui. We are excited for the future he will have at Koanui and semen packages are available in New Zealand and Australia. Layer is a Boehringer Ingelheim Dairy Sire his \$ Indexes are at the top of the breed across the board.

Gallant was purchased in 2017 at the National Beef Expo sale for \$40,000 from Grassmere Polled Herefords. He is doing a superb job with both sons and daughters looking the part. The phenotype, soundness, and docility are exceptional. The consistency and quality of his offspring are very pleasing and with a large proportion of the offering in this sale by him that is the proof! They are good functional cattle that will last. Eye Muscle Area and Retail Beef Yield % both in the top 10% of the breed.

Get Started is in the top end for growth with exceptional soundness and an ideal disposition. He is dark with ideal cosmetics and has done a good job for these attributes. Get Started just pushes the growth beyond where we believe is optimum. However we will continue to use more of him through his son, Koanui Start Q517, Lot 6 in the sale, with Semen Retained for Within Herd Use in our AI programme.

5024 has the cosmetic appeal and impeccable feet that make up an important part of our programme. He will be a maternal powerhouse with plenty of milk and a dam that has the best udder at Koanui. There are some significant Benchmark animals in 5024's pedigree including Platinum Benchmark Koanui Dainty 2453. We have used four sons from 5024's dam, Koanui Minerva 9079. 5024 is a sire trait leader for Milk and Short Gestation Length EBVs.

Midrib has done an exceptional job and will be a very important part of the Koanui breeding programme for a very long time. Midrib is a very easy keeping bull with moderate frame and very maternal. His dam is one of our top cows. We are using 3 of his sons in the herd and his daughters are highly regarded. Midrib 3582 is a rare bull that suits all parts of the industry: heifer, cow, beef or dairy.

5088 is an important corner stone sire within our programme at Koanui. He has impeccable feet and legs, temperament, is well bodied and very correct. His sire was introduced as a new bloodline and his dam, a Spectre female, is from one of our best cow families. Xcelorator is certainly breeding top offspring. He is in the very top of the breed for every \$ Index. In 2019 a half share in Koanui Xcelorator 5088 was sold to Kokonga Herefords. We have retained a 5088 son as a herd sire at Koanui with lovely calves now on the ground. 5088 has exceptional figures. He is in the very top of the breed for all three \$ Indexes.

EBVs Explained

Estimated Breeding Values (EBVs) are estimates of the animal's genetic merit, half of which will be passed onto its progeny. They are expressed in units of measurement for each trait. For more information and EBV Tip sheets refer to http://breedplan.une.edu.au

Calving Ease EBVs

CE DIR – Calving Ease Direct % indicates how easily this bull's progeny are likely to be born. A higher figure means a higher likelihood of easy calving.

CE DTRS - % indicates how easily this bull's daughters are likely to calve. A higher figure means a higher likelihood of easy calving in the daughters.

GEST – Gestation Length in days indicates the predicted gestation length relative to average, the lower the value the shorter gestation length of the bull's calves.

BWT – Birth Weight (kg) predicted from analysis of actual birth weight data, the lower the value the smaller the sire's contribution to the weight of the calf at birth.

Growth and Milk EBVs

200 – 200 Day growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

400 – Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

600 – 600-Day Weight EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

MAT – Mature Cow Weight EBV (kg) is based on the cow weight when the calf is weighed for weaning, adjusted to 5 years of age. This EBV is an estimate of the genetic difference in cow weight at 5 years of age and is an indicator of growth at later ages and potential feed maintenance requirements of the females in the breeding herd.

MILK – 200-Day Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV is indicative of their daughter's milking ability as it affects the 200 day weight of their calves.

Fertility EBVs

SS - Scrotal Size (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

DTC – Days to Calving (days) is an indicator of female fertility. Lower, or more negative, Days to Calving EBVs are generally more favourable reflecting females that get in calf quicker after mating, have early puberty and early return to oestrous after calving.

C	ALVING EAS	SE EBVs GROWTH & MILK EBVs							FERT	ILIT

+2.1	+1.8	-0.6	+4.1		+33	+55	+78	+67	+17		+2.0	-2.

NZ HEREFORD Breed Average EBVs for 2019 Born Calves

FERT	FERTILITY						
SS	DTC						
+2.0	-2.9						

Carcase EBVs

CW - Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days. More positive EBVs indicate heavier carcases at 650 days of age.

EMA - Eye Muscle Area EBV (cm2) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcase. More positive EBVs indicate better muscling on animals.

RIB - Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RUMP - Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site on a 300kg dressed carcase. More positive EBVs indicate more subcutaneous fat and earlier maturity. Two fat EBVs are listed as there is variation between animals regarding fat depth at the two sites.

RBY – Retail Beef Yield % EBVs are estimates of genetic differences between animals in boned out retail beef yield in a standard weight steer carcase. RBY EBVs are reported as differences in percentage (%) yield. Larger, more positive, RBY EBVs are generally more favourable.

IMF - Intramuscular Fat % EBVs are estimates of generic difference between animals in intramuscular fat (marbling) at the 12/13 rib site in a 300kg carcase. Larger, more positive, IMF EBVs are generally more favourable.

\$ Index Values

\$ Index Values

Note there has been a change in the calculation of New Zealand Hereford Selection Indexes this year. A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values.

Hereford Prime Index - Estimates the genetic differences between animals in net profitability per mixed age cow joined for a typical self-replacing commercial herd. Heifers are retained for breeding and so maternal traits are of importance. Steers target 550 kg live weight (300 kg carcase weight & 7 mm P8 fat) at 20 months of age, and heifers 475 kg (260 kg carcase weight & 8 mm fat depth), at 22 months of age.

Beef Heifer Index - Estimates the genetic differences between animals in net profitability per yearling heifer joined for a typical self-replacing commercial herd. Steers target 510 kg live weight (280 kg HSCW and 7 mm P8 fat depth) and heifers 450 kg (250 kg HSCW and 8 mm P8 fat depth) at 20 months of age.

Dairy Beef Index - Estimates the genetic differences between animals in net profitability per mixed age dairy cow joined with all progeny destined for slaughter. Steers and heifer progeny target 550 kg live weight (300 kg carcase weight and 6 mm fat depth) at 24 months of age and at 475 kg live weight (260 kg carcase weight and 7 mm fat depth) at 22 months, respectively.

A standout bull with a great spread of figures, Growth, exceptional Fertility, Milk and Carcase Fats. Bravo Q627 is in the Top 5% of the breed for Hereford Prime \$ Index and has a very good Dairy Beef \$ Index. Used as a Yearling. Semen retained for within herd use. Homozygous Polled. The sire, Otengi Baton 484, has bred very well at Koanui and we have kept a halfbrother to Q627 by him. There is nothing between them! Q627 has a very strong female line with Cherokee and Spectre two of the best female breeders that we have.

+7.0

Similar breeding to the last Lot. Tremendous body with a lot of capacity and performance. A bull that will shift anywhere. Silver Benchmark Dam, Princess 5198, was unfortunately lost but she had the second top priced bull sold to Rock-end last year. Q313 has exceptional \$ Indexes, just under the 10% of the breed for every one. Homozygous Polled.

BWT 200WT 400WT(x2) 600WT SS FAT EMA IMF Genomics Traits Observed:

An ET calf out of the best cow at Koanui. You can't go wrong with this one - depth, substance, and old school quality including rib, volume and cosmetic appeal just like his dam. Leonora 4116 is the model of the ideal cow with volume and capacity, yet very maternal and fertile. We have used three sons of 4116 in the herd - she is an exceptional breeder. Homozygous Polled.

Bravo Q431 missed out on the cosmetics with the red but he is too good not to be included in the sale. Plenty of Benchmark animals in the bottom side of this pedigree. The sire, Otengi Baton 484, has bred very well with two sons used in the herd this year, he is at the very top end of the breed. Q431 is very high in all three \$ Indexes, in the top 10% for Hereford Prime and just under for Beef Heifer and Dairy Beef indexes.

BBSE - Bull Breeding Soundness Evaluation March 2021

The Gold standard for this test is to collect the bull by an Artificial Vagina and have the semen assessed by a registered morphologist. All bulls that are tested by Tararua Breeding Centre are tested using this Gold Standard.

LIBIDO	Bulls must demonstrate the ability to mount an "in season" heifer or cow.
PENILE SOUNDNESS	Each bull's extended penis is examined during mounting for structural soundness, injuries and abnormalities, including deviations, persistent frenulum's, adhesions, genital warts and injuries that may have occurred while out mating.
SEMEN EVALUATION	Each bull's ejaculate, which is collected in an artificial vagina, is examined microscopically by a registered Morphologist for Density, Motility, Morphology and must pass the minimum standards of 70% normal at the time of testing.
