POLLED HEREFORDS

# 2019

*70 Rising 2 Y.O.  
Polled Hereford Bulls*

Performance, Service,  
Semen & BVD Tested.

**1pm Thursday  
June 13th 2019**

On farm auction at:  
"The Sale Shed"  
811 Maraetotara Rd  
Havelock North

Koanui Hood 3135

## ***70 Rising Two Year Old Polled Hereford Bulls.***

For Beef Heifer or Cow Mating, All bulls Performance, Semen, Service and BVD Tested, Structural Soundness and Quiet Disposition Assured.

**SALE DAY: Thursday June 13th, 2019 at 1pm**

**On farm auction at:**

“The Sale Shed”

811 Maraetotara Road,  
RD12, Havelock North 4294

**Auctioneer:**

The logo for PGG Wrightson, featuring a stylized wave graphic above the text 'PGG Wrightson' in a bold, sans-serif font.

**Agent Contacts:**

Cam Heggie 027 501 8182 or Matt Harvey 027 318 6746

**For any Enquiries or Inspection:**

Chris Chesterman 06 874 7844 or 0274 888 635

Jennifer Chesterman 0274 777 637

Fred Chesterman 06 874 7728

Russell Dalldorf 027 2509 096

*All intending purchasers must register at the sales office prior to the sale.*

*PGW will pay a purchasing rebate of 6% of the purchase price excluding GST, plus GST, to livestock companies & recognised independent livestock agents with a PGW account who have introduced buyers to PGW before the sale and/or accompanied buyers to the sale.*

# SAFETY AT KOANUI

**Biosecurity:** On arrival, look for the Biosecurity wash station. You are required to wash and rinse your footwear before entering any paddocks, sale shed and bull viewing complex.

**Report to Koanui staff at the sale shed on arrival on sale day.**

*At Koanui we are committed to doing everything practically possible to ensure the safety of staff and visitors. Please follow instructions and observe signage within the sale area, bull viewing complex and viewing paddocks or while with Koanui personnel. Any out of the ordinary hazards will be pointed out.*

**Please take full care and pay attention to your surroundings at all times.**

*Expect normal farming hazards e.g. large animals, uneven/slippery surfaces and electric fences. If venturing further on the farm then visitors or individuals must be accompanied by Koanui staff.*

- You are required to sign in to the site at the sale shed upon arrival.
- The Emergency evacuation point is the grass area in front of sale shed.
- First Aid is available in the food preparation area on the north side of the sale shed.
- Koanui staff will have emergency mobile phone coverage in the food preparation area.
- An Emergency contact list is provided in the food preparation area.
- Please report any incidents/concerns to Koanui staff as soon as possible.
- Toilets are located behind the sale shed auction and seating area.

***Koanui takes no responsibility for reckless behaviour or lack of respect of rules by visitors.***

# THE KOANUI SALE 2019

**Dear Fellow Beef Breeders,**

It is hard to believe that it is coming up to bull selling season once again! The 2018 sale was very satisfying and one out of the box with so many high priced stud bulls purchased. Once again we are excited about this year's line of bulls and look forward to placing them with our clients' herds.

When analysing last year's sale prices (figure 1. overleaf), we saw some extreme prices for stud bulls and a push coming from the stud breeders throughout the sale. However, the majority of bulls sold were in the under \$5000 up to \$10,000 price range and two were passed in. We believe that despite the strength of last year's sale you could still have purchased a bull within your price range and to quote Auctioneer, Cam Heggie, talking about the 2019 offering "It wouldn't be here if it wasn't good!"

Our focus remains on our commercial bull market. We aim to produce a line of bulls that have a balanced set of performance figures. We offer a depth of selection, diversity of bloodlines and strong selection pressure with our bulls selected from the progeny of 750 registered cows.

Now running 800 cows with all calving as two-year-olds, no dry females retained and 75% calving in the first cycle, we believe we run a profitable commercially based cattle operation. With these sort of numbers, we don't have a "favourite" mob, it's all about efficiency and profitability. Admittedly our business does see added value to our animals produced but we also have significant added costs such as recording, health and service testing, investment in herd genetics and supporting our clients where we can.

We are very focussed on the herd and passionate about the quality, functionality and profitability of our cows. We are proud of Koanui and totally committed to the beef industry. We always need to be aware of changes and try to look towards the future for our industry which is under pressure from political, climatic and environmental challenges.

Please communicate with us if you see a need for us to adopt a change or technology that could help enhance your business. We are in this together and are all striving for sustainability and a future in the beef industry.

**Kind regards,**

*Chris, Jennifer and Fred Chesterman*

### Distribution of 2018 Sale Prices

**Figure 1.**

The majority of 2018 bulls that were sold were in the \$4,000 to \$10,000 price range. Stud interest also created some extreme prices in last year’s sale.

### 2019 Sale Bulls’ Hereford Prime (\$) Index Compared to Breed Distribution

**Figure 2.**

There is an impressive distribution of very high Hereford Prime \$ Indexes in the Koanui 2019 sale bulls. 82% are in the top 50% of the breed for Hereford Prime \$ Index.

## EBVs, SELECTION INDICES AND ACCURACY

An animal's breeding value is its genetic merit, half of which will be passed on to its progeny. While we will never know the exact breeding value, for performance traits it is possible to make good estimates. These estimates are called Estimated Breeding Values (EBVs).

In the calculation of EBVs, the performance of individual animals within a contemporary group is directly compared to the average of other animals in that group. A contemporary group consists of animals of the same sex and age class within a herd, run under the same management conditions and treated equally. Indirect comparisons are made between animals reared in different contemporary groups, through the use of pedigree links between the groups.

EBVs are expressed in the units of measurement for each particular trait. They are shown as +ive or -ive differences between an individual animal's genetics difference and the genetic base to which the animal is compared. For example, a bull with an EBV of +50 kg for 600-Day Weight is estimated to have genetic merit 50 kg above the breed base of 0 kg. Since the breed base is set to an historical benchmark, the average EBVs of animals in each year drop has changed over time as a result of genetic progress within the breed.

The absolute value of any EBV is not critical, but rather the differences in EBVs between animals. Particular animals should be viewed as being "above or below breed average" for a particular trait.

Whilst EBVs provide the best basis for the comparison of the genetic merit of animals reared in different environments and management conditions, they can only be used to compare animals analysed within the same analysis. Consequently, Hereford BREEDPLAN EBVs cannot be validly compared with EBVs for any other breed.

Although EBVs provide an estimate of an animal's genetic merit for a range of production traits, they do not provide information for all of the traits that must be considered during selection of functional animals. In all situations, EBVs should be used in conjunction with visual assessment for other traits of importance (such as structural soundness, temperament, fertility etc). A recommended practice is to firstly select breeding stock based on EBVs and to then select from this group to ensure that the final selections are otherwise acceptable.

EBVs are published for a range of traits covering fertility, calving ease, milking ability, growth, carcass merit and feed efficiency. When using EBVs to assist in selection decisions it is important to achieve a balance between the different groups of traits and to place emphasis on those traits that are important to the particular herd, markets and environment. One of the advantages of having a comprehensive range of EBVs is that it is possible to avoid extremes in particular traits and select for animals with balanced overall performance.

## **GROWTH AND MILK EBVS**

**BWT** – Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value the lighter the calf at birth and the lower the likelihood of a difficult birth. This is particularly important when selecting sires for use over heifers.

**MILK** – Milk EBV (kg) is an estimate of an animal's milking ability. For sires, this EBV indicates the effect of the daughter's milking ability, inherited from the sire, on the 200-day weights of her calves. For dams, it indicates her own milk ability.

**200** – 200-Day Growth EBV (kg) is calculated from the weight of animals taken between 80 and 300 days of age. Values are adjusted to 200 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth to early ages.

**400** – 400-Day Weight EBV (kg) is calculated from the weight of progeny taken between 301 and 500 days of age, adjusted to 400 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for yearling weight.

**600** – 600-Day Growth EBV (kg) is calculated from the weight of progeny taken between 501 and 900 days of age, adjusted to 600 days and for dam age. This EBV is the best single estimate of an animal's genetic merit for growth beyond yearling age.

## **FERTILITY EBVS**

**SS** – Scrotal Size EBV (cm) is an indicator of male fertility as expressed in semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

### **Carcase EBVs**

**EMA** – Eye Muscle Area EBV (cm<sup>2</sup>) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals. Sires with relatively higher EMA EBVs are expected to produce better muscled and higher percentage yielding progeny at the same carcass weight than will sires with lower EMA EBVs.

**Rib and rump** - Rib Fat and Rump Fat EBVs (mm) estimate the genetic differences in the fat depth at the 12/13th rib and P8 sites respectively, adjusted to a standard 300kg carcass. More positive EBVs indicate more subcutaneous fat on the carcass.

### **Accuracy**

**ACC (%)** - is based on the amount of performance information available on the animal and its close relatives- particularly the number of progeny analysed. Accuracy is also based on the heritability of the trait and the genetic correlations with other recorded traits. Hence accuracy indicates the “confidence level” of the EBV. The higher the accuracy value the lower the likelihood of change in the animal's EBV as more information is analysed for that animal or its relatives.

*For more information and EBV tipsheets refer to:*

[http://breedplan.une.edu.au/index.php?option=com\\_content&task=view&id=14&Itemid=35](http://breedplan.une.edu.au/index.php?option=com_content&task=view&id=14&Itemid=35)

# UNDERSTANDING HEREFORD SELECTION INDEXES

Selection Indexes rank animals for a single production goal – PROFIT. They take the hard work out of determining how much emphasis to give each of the available growth, maternal, carcass and fertility EBVs, when selecting parent animals. An Index is a composite EBV (EBV for Profit) for traits best suited to a particular production system and/or target market.

There are four breed-specific Indexes for Hereford cattle:

## 1. Hereford Prime/Maternal Index

Focuses on producing a 275kg carcass weight steer off grass by 18 months of age, from a self-replacing cow herd.

## 2. Export/Maternal Index

Focuses on the production of a 300kg carcass weight steer off grass, by 20 months of age, from a self-replacing cow herd (a herd producing females over a 5 year period to continue the breeding programme).

## 3. Dairy/Maternal Index

Aims to produce readily marketable crossbred steers at 475kg live weight by 16 months of age and also dairy cross heifers for use as dams in beef-breeding cow herds.

## 4. Dairy Terminal Index

Estimates the genetic differences between animals in net profitability per cow joined for an example commercial dairy herd targeting the production of dairy beef progeny where all progeny are slaughtered. Steers are assumed marketed at 500 kg live weight (260 kg carcass weight and 6 mm fat depth) at 18 months of age.

## What do the Index Figures Mean in Terms of Herd Profitability?

You have established that the production system that most closely mirrors your breeding programme is represented by the Export/Maternal Index. There are two Hereford bulls you are interested in with Export/Maternal Indexes of \$60 and \$40 per cow mated respectively and you want to compare their lifetime profitability. Assuming each mates 200 cows during its lifetime, the first bull will generate \$2000 i.e.  $[(\$60 - \$40) / 2 \times 200]$  more profit during his lifetime than the second bull. In other words, you can afford to pay \$2000 more for the first bull and still be financially as well off compared with purchasing the second one.

**Note** that \$ Index Values for individual animals are sensitive to the assumptions used in the BreedObject analysis to calculate the selection index. For more information on these assumptions and weightings go to [www.herefords.co.nz](http://www.herefords.co.nz)

*SEMEN PACKAGE. We are offering a 100 straw semen package in retained herd sire Koanui Kahuna 7299. Semen is available for with-in herd use to a maximum of two stud herd prefixes. 7299 was used heavily as a yearling. His sire Yavenvale Kahuna K115 is an outstanding bull with style, cosmetic appeal and real softness. We have used four sons from 7299's dam, Koanui Minerva 9079, who we rate as the best uddered female at Koanui. She is a donor cow and an exceptional breeder with a diverse pedigree. Get ahead with this new genetic package!*

Koanui Kahuna 7299 at two weeks of age

These can be used as a set of benchmark figures that approximate the current genetic level for the breed in Australia and New Zealand.

**IT ALL STARTS WITH A FIT BULL TEAM**

Waiting for three weeks into mating to find out if your bull team is working is like playing Russian roulette

Ensure your bull team are in top shape for the breeding season.

Tararua Breeding Centre & Totally Vets on-farm fertility testing program:

- Libido
- Mounting capability
- Anatomical evaluation
- Semen evaluation
- Animal welfare friendly

Our experienced technicians use a natural service technique using an AV (artificial vagina) as our preferred method.

## BBSE - Bull Breeding Soundness Evaluation

The Gold standard for this test is to collect the bull by an Artificial Vagina and have the semen assessed by a registered morphologist. All bulls that are tested by Totally Vets/Tararua Breeding Centre are tested using this Gold Standard.

### LIBIDO

Bulls must demonstrate the ability to mount an "in season" heifer or cow.

### PENILE SOUNDNESS

Each bulls extended penis is examined during mounting for structural soundness, injuries and abnormalities, including deviations, persistent frenulum's, adhesions, genital warts and injuries that may have occurred while out mating.

### SEMEN EVALUATION

Each bulls ejaculate, which is collected in an artificial vagina, is examined microscopically by a registered Morphologist for Density, Motility, Morphology and must pass the minimum standards of 70% normal at the time of testing.

## CONDITIONS OF SALE

1. The New Zealand Stock & Station Agent's Association Conditions of Sale and, to the extent deemed relevant by PGG Wrightson Limited (PGW), PGW's Terms of Sale apply to this sale. When proceeds are credited or a purchase is debited to a PGW monthly credit account, then PGW's Monthly Account Terms of Trade (as amended from time to time) apply to the extent deemed relevant by PGW. These terms can be inspected at the registration desk and on the wall in the auction room. The current versions of PGW's Terms of Sale and Monthly Account Terms of Trade are also available online at:  
[www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions](http://www.pggwrightson.co.nz/Our-Company/Terms-and-Conditions) or in hardcopy on request.
2. Buyers are requested to leave their **name, NAIT Number, full address, phone number** and **specific delivery instructions** with the booking clerk before leaving the sale.
3. Transfers will be available on Stud Bulls. Please provide **Transfer Herd Number(s)** on Purchaser's Slip if a transfer is required.
4. **PAYMENT:** Fourteen days after the sale.
5. **T.B. STATUS C10. BRUCELLOSIS ACCREDITED.**
6. No warranty will be given by the Auctioneer with any Lot, and as all Lots are open for inspection prior to the commencement of the sale, the same are sold with all faults, if any. No compensation shall be made in respect of any fault or error of description of any Lots; however, the vendor reserves the right to make compensation to a buyer if it is the vendor's wish.
7. Although all care has been taken in compiling this Catalogue, no responsibility will be taken for any errors or omissions thereof.
8. Every Lot will be at the risk of the purchaser as from the fall of the hammer.
9. Buyers are advised to insure Bulls. All Bulls remaining on the property pending delivery should be insured by the Purchaser as no responsibility shall be taken by the Vendor. All Bulls are to be uplifted by 1st July, 2019 unless arrangements prior to the sale have been made.
10. All Lots sold exclusive of G.S.T.
11. **ALL STUD BULLS** purchased must be uplifted as soon as transport is available.
12. All Bulls have been Service and Semen tested. All bulls are BVD Tested Negative and vaccinated for BVD with Hiprabovis prior to sale.
13. **SAFETY AT KOANUI: Please refer to page 2 of this document. All visitors must report directly to management.**

– PLEASE BRING THIS CATALOGUE TO THE SALE –
